

FLEET MANAGEMENT SOLUTIONS TO REDUCE RUNNING COSTS & MOVE YOUR BUSINESS FORWARD

Reduce running costs and get more from your existing fleet with technology designed to streamline the way your fleet and staff operate. Geotab's unrivaled fleet management solution lets you harness fleet asset data for **efficiency, safety, compliance and expandability.**

FLEET MAINTENANCE

With Geotab's fleet maintenance software platform, you can pull engine fault codes or analyse many other data points to identify which vehicles need your mechanic's help first. Target priority fleet vehicles and move from simply scheduled servicing to proactive fleet maintenance, boosting the productivity of both the fleet and the support crew.

FUEL MANAGEMENT

Get on top of excessive idling and inefficient routes to cut your petrol expenses. Let drivers know when they breach your customised rules for idling, to encourage them to turn the vehicle off instead. Cutting fuel not only saves you money, but it also lowers the carbon footprint of your fleet.

ASSET OPTIMISATION

Gain the most value out of every hour your team spends behind the wheel with assets tracking and management. Oversee every asset in the field, and monitor how they're used. Track powered and unpowered assets, all in one easy-to-use platform to optimise fleet productivity. Develop and send your drivers optimised routes. Plan stops and monitor how your team adheres to them, or dispatch the nearest or next available vehicle to a new job.

SAFETY & COLLISION MONITORING

Manage how your team uses your vehicles to help ensure they are operating safely and effectively. Generate standard or customised reports to monitor fleet safety. Set standards and goals for how you want your fleet to operate. Geotab's fleet safety scorecard lets you identify safe or risky drivers, so you can reward or coach them towards your safety goals.

Integrate a camera solution to receive video records of events. Should a collision occur, you will have the evidence required to support insurance claims. Monitor driver habits that might impact safe driving or asset value, such as mobile phone use or smoking.

DRIVER MONITORING

How the vehicle is driven has a major impact on its condition. Harsh acceleration, cornering and braking can all cause increased wear and tear on your assets, impacting business profitability. Likewise speeding, aggressive acceleration and excessive idling could be wasting your fuel budget.

Geotab empowers you to intervene when it comes to unsafe or risky drivers, and promote fuel-efficient driving. Remind drivers to make better choices with in-vehicle, audible announcements and driver scorecards.
